comuny
Empowering Personal Data

Senior DevSecOps Engineer for Mobile Identity Technology (full-remote) (m/w/d)

Do you want to join a team where your work significantly impacts data privacy and data sovereignty for everyday people? comuny for a future where your mobile phone carries and protects all your personal data you need in your everyday life with officials and service providers. We ensure you have it entirely under control with those who you share your data. With a state-of-the-art de-centralized architecture, the comuny tech team thrives by staying ahead of the curve of the demanding mobile identity world. We are a small team of makers out of the health and cybersecurity sector and are in search of somebody contributing to our vision big time.

(Health-) Insurances, banks, the German state require verified customer identities, authentication at services, and digital signatures to digitize their most precious use cases. This is where comuny comes in with a revolutionary de-centralized approach. We simplify processes through standardization, normalization, decentralization, and security at the same time.

Where you come in

- Our backend guarantees the secure transmission of personal data from the user to the service. It is provided as Kubernetes/Docker Containers to our customers. It may run in AWS, GCS, or Azure Environments.
- Secure handling of user data, understanding state/security regulations, and interpolating them into our software will be essential.
- **Development of solutions based on AWS, Azure, and GCP cloud technologies**. Implement modern and fully automated build and deployment processes (CI/CD).
- **Operation of container applications, e.g., based on Kubernetes, considering risks in the context of cyber security.**
- experience and success in **programming backends with Java or Kotlin**
- Completed studies and/or training focusing on computer science, application development, and similar, as well as career changers with appropriate experience.
- Consult and educate our customers on how to work with our technology.
- You should know Linux, git, and git-flow
- Like to use Clean Code and Uncle Bob
- Fancy lean & agile, TDD, pair programming
- Have hands-on experience with REST APIs in design and usage and work closely with our mobile app developers.
- You are fluent in English, and ideally, you speak German as well (not a must)
- Residence in Germany
- **Experience with PKI Infrastructures or Cryptography is a strong plus.**
- Ideally, you have led projects before and are a hands-on & result-oriented technician excited about innovative technological solutions.
